CC The present sequence is that of the cis-acting regulatory region of the curvine Ang-2 gene located 5' to the start of transcription. This cis-acting DNA regulates preferential expression in endothelial muscle cells of a polypeptide-encoding DNA to which it is operably linked. The cis-envention provides compositions that include a polynucleotide encoding a reporter gene (e.g. a light-generating moiety), a polynucleotide encoding a selectable marker (e.g. an antibiotic) and optionally a regulatory claim of it that retains the ability to effect transcription of sequences, or a portion of the sequences in endothelial cells. The composition is used for imaging cultumour growth, engraftment and/or metastasis can be monitored by cobserving light emitted from the light-generating gene product. Also conserving light emitted from the light-generating gene product. Also cells, cells from established cell lines, or tumour cells) comprising the vector or polynucleotides, and transgenic animals and methods for their clanentification of a compound capable of modulating angiogenesis or which case transduction mathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches 1220;

Also claimed is a population of oligonucleotide probes (I) specific for measuring the expression levels of members of a classifier population of genes or a toxicity-related population of genes. (I) are useful for identifying agonists or partial agonists of Peroxisome Proliferator-Activated Receptor (PPAR) gamma. ADZ62007-ADZ62272 are oligonucleotide probes which are useful in the method of the invention to measure the expression pattern of the classifier-related population of mouse genes ADZ61704-ADZ62006. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at seqdata.uspto.gov/sequence.html?DocID=20050084872.

The molecules of the invention demonstrate vulnerary, antiinflammatory and vasotropic activities whilst the fusion protein may be useful for preparing a composition for treating necrosis, ischaemia or inflammation, as well as for promoting wound healing. The current sequence is that of the human PG-3 DNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New fusion protein comprising a fibrinogen-like or coiled-like domain, useful for preparing a composition for treating necrosis, ischemia or inflammation, or for promoting wound healing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 240823 BP; 66383 A; 50394 C; 51548 G; 72418 T; 0 U;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a compound targeted to a nucleic acid molecule encoding the human Angiopoletin-2 polypeptide. The compound is an arisense oligonucleotide that specifically hybridises with the nucleic acid and inhibits expression of the polypeptide. The antisense oligonucleotide comprises at least one modified internucleoside linkage i.e. a phosphorothioatte linkage, at least one modified sugar moiety, preferably a 2.0-methoxyethyl sugar moiety, or at least one modified nucleobase comprising a 5-methylcytosine. The antisense compounds are useful for modulating the expression of the human Angiopoletin-2 polypeptide and in preparation of a composition for treating hyperproliferative disorders, e.g. cancer. This sequence represents DNA encoding the murine Angiopoletin-2 polypeptide of the invention.

CC binding fragment of angiopoietin (Ang)-1 protein or a mutant Ang-1. Also
CC provided are methods of treating an individual suspected of having
CC coronary artery disease, vascular disease or a condition involving
CC ischaemia; of promoting angiogenesis, endothelial survival and
CC individual suspected of having a disease related to lack of blood vessels
CC related to lack of blood vessels such as ischaemia in hearts and limbs;
CC artherosclerosis risk by maintaining the patients with the diseases
CC vessels; to assist the recovery of the patients who had stroke and the
CC cells and establish endothelial monolayer and inhibit excessive
CC vessels to assist the restenosis by inhibiting re-closure of blood
CC vessel after inserting stents into blood vessels; to make stable and
CC vessel after inserting stents into blood vessels; to make stable and
CC vessel after inserting stents into blood vessels; to make stable and
CC vessel after inserting stents into blood vessels; to make stable and
CC vessel after inserting stents into blood vessels; to make stable and
CC vessel after inserting stents into blood vessels; to make stable and
CC dabetes and/or arthritis in an individual suspected of being at risk of
CC disease, vascular disease and disorders, e.g. cancer, coronary artery
CC disease, vascular disease, ischaemia, restenosis, diabetes, stroke,
CC angiogenesis, or arthritis. The present sequence represents the mouse Ang
CC disease, vascular disease, ischaemia, restenosis, diabetes, stroke,
CC -2 encoding DNA.

New isolated small interfering RNA (siRNA) comprising a sense RNA strand and an antisense RNA strand, useful for treating angiogenic disease, e.g diabetic retinopathy or age-related macular degeneration.

Claim 2; SEQ ID NO 5; 182pp; English

CC comprises a sense RNA strands form an RNA duplex, where the sense RNA strand and an antisense RNA strand. The sense and CC comprises a nucleotide sequence substantially identical to a target Sequence of 19-25 contiguous nucleotides in human Angl. Ang2 or Tie2 CC further comprises: a recombinant plasmid comprising nucleic acid Sequences for expressing an siRNA comprising a sense RNA strand and an CC antisense RNA strand; a recombinant viral vector comprising nucleic acid sequences for expressing an siRNA comprising a sense RNA strand and an CC antisense RNA strand; a pharmaceutical composition comprising siRNA, the plasmid, or the viral vector and a pharmaceutical carrier; a method of cinhibiting expression of human Angl. Ang2 or Tie2 mRNA, or an alternative splice form, mutant, or cognate; a method of inhibiting angiogenesis in a composition comprising a subject; and a complex strand and an anglogenesis in a subject; and a subject; and a complex strand and an complex stran The invention relates to a novel isolated small interfering from type I diabetes in a subject comprises RNA (siRNA)

The invention relates to a compound targeted. The onucleic acid molecule encoding the human Angiopoietin-2 polypeptide. The compound is an antisense oligonucleotide that specifically hybridises with the nucleic acid and inhibits expression of the polypeptide. The antisense oligonucleotide comprises at least one modified internucleoside linkage

nucleic

Claim 1; SEQ ID NO 4; 102pp;

The complications arising from type I diabetes are selected from d retinopathy, diabetic neuropathy, diabetic nephropathy, or mac disease. The macrovascular disease is coronary artery disease, cerebrovascular disease, or peripheral vascular disease. This

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   i.e. a phosphorothioate linkage, at least one modified sugar moiety, preferably a 2'.O-methoxyethyl sugar moiety, or at least one modified nucleobase comprising a 5-methylcytosine. The antisense compounds are useful for modulating the expression of the human Angiopotetin.2 polypeptide and in preparation of a composition for treating hyperproliferative disorders, e.g. cancer. This sequence represents DNA encoding a human Angiopotetin-2 polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence

CC discloses a high throughput method for detecting differentially expressed CC cDNAs in a sample. The cDNAs of the invention may have cC cDNAs in a sample. The cDNAs of the invention may have cC synaecological; vasotropic and cerebroprotective activities and may be used in gene therapy. The cDNAs of the invention may be used in a high-cC cDNAs in a sample, or screening several molecules or compounds to the cC cDNAs in a sample, or screening several molecules or compounds to the protein. A protein encoded by the cDNA may be used to screen several molecules or compounds to the protein, or to produce or purify an antibody to the protein, or to produce or purify an antibody to the protein from a sample. The nucleotides may be useful for cC diagnosing, staging, treating, or monitoring the progression of treatment cC disease, hypertension, diabetes, pre-cclampsia, ischaemia-reperfusion cC diagnosing pre-pathologic disorders, pre-cclampsia, ischaemia-reperfusion cC diagnosing pre-pathologic disorders, and chronic or acute diseases genetic or gene expression analysis of several new nucleic acid compounds to the protein. The present sequence represents a cDNA of the invention of the protein. The present sequence represents a cDNA of the invention confidence data for this patent did not form part of the specification, but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention relates to a combination comprising several differentially expressed in activated vascular tissue.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a novel fusion protein comprising a fibrinogen-
like domain (FLD) or coiled-coil domain (CCD). The domain may be
identical or homologous to that of an angiopoietin-related factor (ARF),
examples of which include Ang (angiopoietin)-1, Ang-2, Ang-4, Ang-4 and
Ang-2X. The molecules of the invention demonstrate vulnerary,
                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 763 BP; 202 A; 183 C; 205 G; 173 T; 0 U;

                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a nucleic acid (I) comprising a segment of 18 bases of chemically pretreated DNA of angiogenesis-associated genes (II) having sequences (ABQ66971-ABQ67178) or their complements. (I), also related oligomers, are used to evaluate the methylation status and/or single-nucleotide polymorphisms, in angiogenesis-related genes, for diagnosis and treatment of eye diseases, proliferative retinopathy, neovascular glaucoma, solid tumours, inflammation, rheumatoid arthritis, diabetic retinopathy, macular degeneration caused by neovascularisation, psoriasis, arteriosclerosis, inflammatory bowel diseases, ulcers and Crohn's disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fip.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New nucleic acid fragments from chemically treated angiogenesis-
associated genes, useful for determining methylation status, e.g
diagnosis or treatment of cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; angiogenesis; methylation; eye disease; glaucoma; tumour; inflammation; rheumatoid arthritis; diabetic retinopathy; antiulcerds; macular degeneration; inflammatory bowel disease; Crohn's disease; antirheumatic; antiarthritic; antidiabetic; antipsoriatic;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   8
                                                                                                                                                                                                           The invention relates to a nucleic acid (I) comprising a segment of 18 bases of chemically pretreated DNA of angiogenesis-associated genes (II) having sequences (ABQ66971-ABQ67178) or their complements. (I) also related oligomers, are used to evaluate the methylation status and/or single-nucleotide polymorphisms, in angiogenesis-related genes, for diagnosis and treatment of eye diseases, proliferative retinopathy, neovascular glaucoma, solid tumours, inflammation, rheumatoid arthritis, diabetic retinopathy, macular degeneration caused by neovascularisation, psoriasis, arteriosclerosis, inflammatory bowel diseases, ulcers and Crohn's disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New nucleic acid fragments from chemically treated angiogenesis-
associated genes, useful for determining methylation status, e.g
diagnosis or treatment of cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to

Site 3: Not I; The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarose
gel.First strand cDNA synthesis was primed with Oligo-dT
grimer containing a Not I site .Double strand cDNA was
size selected according to mRNA size fraction, ligated
with EcoR I adaptor, digested with NotI and then cloned
directionally into pYX-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is AATAATTACG. This library was created for the University
Iowa Brain Anatomy Project (BMAP): 'Gene Discovery in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        quality sequence stop: 661.
           (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

/note="Organ: pancreas; Vector: pSPORT1 (GIBCO); Site_1:
/note="Organ: pancreas; Vector: pSPORT1 (The pancreas was obtained from Gerard and been published. The pancreas was obtained from Gerard Gradwohl (PNAS 97 P1607-1611, 2000). The cDNA's were prepared with an oligo containing a NotI site, and SalI linkers were added to the ends. The inserts were cut with NotI before being cloned into the NotI-SalI sites in the vectors. This is one of two libraries, ngn3 wt and ngn3 -/-. The wt library is in pSPORTI, T7 promoter is 5'."
